

# Attic Ventilation for the Manufactured and Modular Home Industry

## Cut-Away View

## How The System Works

Air enters through the soffit vent and is conducted along the roof sheeting above the insulation blanket. The **Drift Blocker** allows insulation to be packed out over the tie plate and stops airflow in void areas. Not only is the soffit free from drifting insulation, but the efficient flow of air eliminates condensation and thus prevents unhealthy mold and costly ice dams.

## Product Benefits:

- Designed specifically for the manufactured & modular home industry
- Made of 100% recycled self extinguishing PVC material
- Fits 16" & 24" on center rafters at any roof pitch
- Labor savings - sheets available in 10ft. - 40ft. lengths
- The "Drift Blocker" eliminates stuffing of insulation bats and prevents insulation drifts during transportation. No costly callbacks
- Allows manufacturers to insulate out over the tie plate
- Works great in cathedral ceiling applications and is excellent for retrofit
- Also a great fit for "Stick" construction
