

## 14001 Certification – Art Murphy

### ISO 14001 : 2004 Certified

As the world focuses on becoming more eco-friendly, Brentwood Industries has taken a proactive role in the plastics industry by becoming certified in ISO14001. This Environmental Management System enables an organization to monitor, control, and improve its environmental impact by using a systematic approach to continuously set and obtain new objectives while eliminating liabilities.

Brentwood's Specialty Products Group joins an elite group of companies in North America in becoming a "Green Manufacturer" through this value-added program.

In order to positively affect our employees, customers, and surrounding community, Brentwood is committed to using our resource management to provide a complete closed loop for all purchases and processed materials, from beginning to end.

Our primary objective is to constantly expand our environmental consciousness through the reduction of landfill contributions and expanding the amount of recycled material, which will ultimately improve plant costs.

ISO14001, like ISO9001 and TS16949 will be another tool for Brentwood to demonstrate to our customers our commitment to improving their product and the business relationship.
